

## Accessibility Statement

**Get More Math is committed to providing an accessible learning experience for all students.** Our platform supports many accessibility features, including:

- a comprehensive teacher-enabled read aloud tool that specifically addresses math structures
- keyboard navigation
- high contrast colors
- dedicated layouts for desktop, tablet, and mobile to ensure that content, controls, and visual structure remain easy to use on any screen
- printable exams and worksheets are available as an alternative to digital content

Additionally, standard native features within the Get More Math platform support the needs of a neurodiverse learning community by guiding students directly into math practice without requiring navigation or selection, thereby reducing cognitive effort and supporting sustained attention. Also, nonessential reward animations can be turned off to support students who benefit from a calmer, distraction-free experience.

We actively review our product against WCAG 2.2 AA guidelines and are working to enhance accessibility, including improvements to math content presentation and non-color indicators.

Get More Math welcomes feedback on student experience and accessibility. We regularly collaborate with education partners to support student accommodations and provide prompt response to suggestions and concerns.
